

Allocating Crews to Trucks, on a PC

When you allocate a crew member to a truck they will receive a message which is their cue to drive immediately to the station for departure.

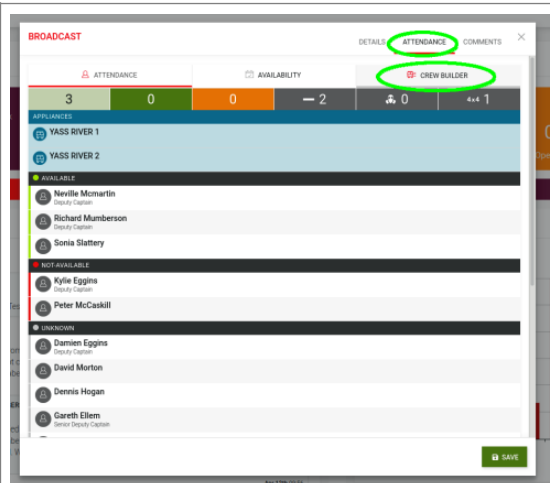

The allocation can be done via the RFS ACTIV web page or the phone app.

Unless pre-arranged you should only allocate members from the 'Attending List' as they have replied with a thumbs up from an alert or broadcast.

On the web page click on the incident, then click on 'Attendance', then 'Crew Builder'

Look for members under the 'Attending' list, these are ones that have given the green thumbs up to the alert.

You can choose 'Available' or even 'Not Available' but you need to know that they are available perhaps through a phone call.

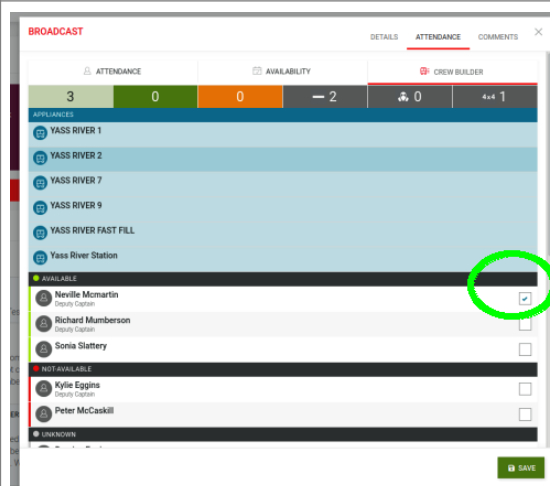

1. Tick the names of the members, including the driver

2. Tap the truck to assign them to that truck

Members will receive a message and should drive immediately to the station.

3. If you change your mind, untick the member and then the truck.

4. Surplus crew should be assigned to 'STAND DOWN' or 'STAND BY'

5. In the image on the right, Neville McMartin has been allocated to the Cat 2.
